The full access floor system is suitable for application in offices, lobbies as well as technical areas (i.e. Computer rooms and telecom exchanges). The system consists of removable modular panels (nominal size 600 x 600mm) supported on a grid of adjustable supports with stringers thus providing a load bearing platform and creating a cavity underneath to be used as a technical fully accessible space where electrical cables, pipes and any other useful service can be housed. The support system shall consist of a base plate bonded directly to the concrete floor, with a vertical stud and an adjustable head. The pedestals are positively located at the head by means of a locking nut. A conductive head gasket provides a suitable locating seat for the panel corners and acts as soundproofing and an airtight seal. Stringers are provided with a clip-on self-extinguishing plastic gasket that serves as an airtight seal between the stringer and panel surface. Floor panels are fully interchangeable and easily cut to be adapted to the shape of perimeter walls and boundary elements. The raised floor system provides a cavity in which various building services may be located (i.e. Plumbing, lighting, communications and network facilities). The cavity can also be used as a floor wide plenum to distribute conditioned air easily and inexpensively.

Panel finishing

The floor panels are finished on the bottom side with aluminium foil 0.05mm thick. The aluminium foil serves as a reflective surface in the event of a fire and protects the panel from possible water infiltration and constitutes an equipotential surface that guarantees the electrical link between the panel surface and the substructure. The panel's top surface is finished with a high-pressure laminate made from various sheets of Kraft paper and a layer of decorative paper, which are impregnated with heat-set resins and cured under high pressure and high temperature.

Laminate thickness	1.2mm

Stability: The floor shall maintain its mechanical properties and will not deform so as compromise its structural integrity.

Flame tightness: The floor shall prevent the leakage of smoke and flames.

Thermal insulation: The floor shall provide efficient insulation against the transmission of heat. The floor surface not exposed to fire (i.e. The walking surface) shall not exceed 140 deg. C, in order to allow the safe escape of people in the event of a fire.

Electrical characteristics

The access floor system must have anti-static properties. Therefore the transversal electrical resistance of the raised floor system is measured from the top surface of the finishing material to the support structure and shall not be higher than 2×10^{10} ohm and not lower than 1×10^8 ohm, when measured according to DIN 51953.

Loading capacities

Loading capacity of the raised floor system composed of the floor panels on the supports with stringers must be the following:

Uniformly distributed load with deflection = 2mm	1 770 kg
Concentrated load with deflection = 2mm(In centre of panel over a 25 x 25mm square)	310 kg
Max. Concentrated load with deflection = 2mm	680 kg
Axial vertical load	2 700 kg

NB: Do not proceed with installation until sub-floor surfaces are clean, dry, clear off other trades and ready to receive access flooring.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Standard Bidding Document (SBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Treasury Regulation 16A9 prescribes that accounting officers and accounting authorities must take all reasonable steps to prevent abuse of the supply chain management system and authorizes accounting officers and accounting authorities to:
 - a. disregard the bid of any bidder if that bidder, or any of its directors have abused the institution's supply chain management system and or committed fraud or any other improper conduct in relation to such system.
 - b. cancel a contract awarded to a supplier of goods and services if the supplier committed any corrupt or fraudulent act during the bidding process or the execution of that contract.
- 4 This SBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (SBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
